

A Successful Post-Pilot Workshop

RESCUER System in Action

The RESCUER project, dedicated to advance emergency response technologies, reached a significant milestone with its 1st Post Pilot Workshop held on the 20th and 21st of February 2024.

Hosted in Aix-en-Provence, France, the event gathered 80 participants for an immersive experience with the RESCUER system.

RESCUER

Demonstration - 20 February 2024

The highlight of the workshop was an in-person demonstration of the RESCUER system, featuring the implementation of two realistic emergency scenarios.

Participants had a unique opportunity to witness the system's capabilities firsthand, showcasing its effectiveness in real-world situations.

Conference - 21 February 2024

The subsequent hybrid conference, with both in-person and remote participation options, provided a platform for deeper engagement. The morning session commenced with a comprehensive presentation of the RESCUER project, followed by a debriefing session on the previous day's demonstration.

The roundtable discussion focused on two main topics:

- Overview of technologies for first responders, and
- Better involvement of end-users in R&D projects: challenges and solutions.

RESCUER

RESCUER was honored to have Philippe Quevauviller from the Directorate - General Mitigation and Contrôleur Général Christophe Mignot from Lyon Metropole Fire Department as keynote speakers who brought valuable insights and expertise to our roundtable. It was also a great pleasure to have with us:

- Géraud Canet - French Ministry of Higher Education and Research
- Ives Van Haute - Belgian National Crisis Centre
- Colonel Denis Giordan - Savoie Fire Department
- Marie-Christin Bonnamour - Public Safety Communications Europe
- Claire Charlier - Deloitte Digital
- Sebastien Lahaye - SAFE Cluster

The afternoon segment of the conference was devoted to substantive conversations addressing ways to increase the engagement of emergency responders in European Research and Development (R&D) projects.

Discussions emphasized collaborative strategies aimed at enhancing the coordination between emergency responders and R&D initiatives, thereby nurturing more robust and efficient partnerships.

The 1st Post Pilot Workshop of RESCUER was also a great opportunity to collaborate with other projects and included a MARKETPLACE with the following projects:

Mixed Reality

MR

Search
& Rescue

iProcureSecurity
SOLUTIONS FOR EMERGENCY MEDICAL SERVICES
